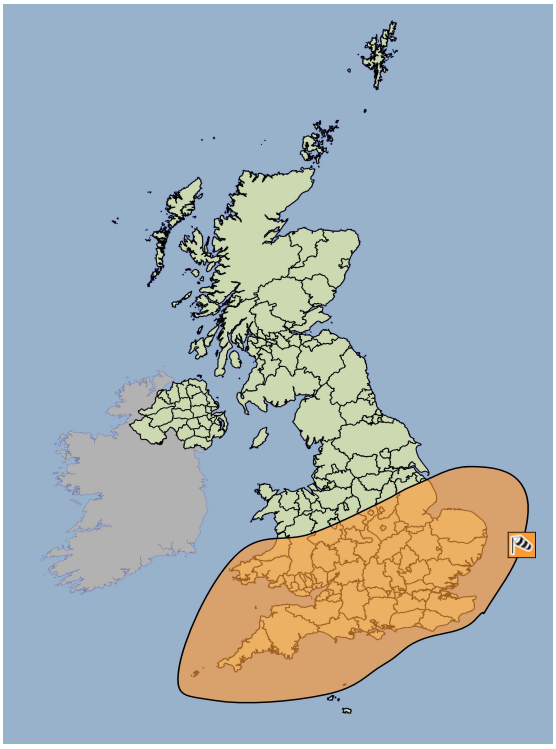
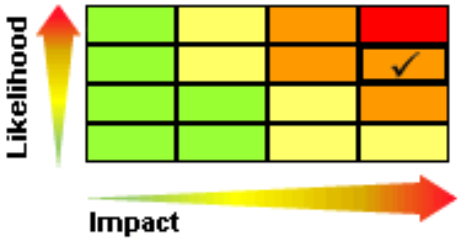
National Severe Weather Warning Service





Chief Forecasters Assessment
A developing storm is expected to reach the UK later on Sunday. This is expected to run northeastwards, across England and Wales during Monday, with very strong winds on its southern and western flanks. We are expecting gusts of 60-70 mph widely and locally over 80 mph, especially on exposed coasts, both in the southwesterly winds ahead of the low centre and west to northwesterly winds behind it.

20 to 40 mm of rain may fall within 6 to 9 hours, leading to localised flooding, especially where drainage is impeded by wind-blown debris.

The Met Office have issued an **Amber Warning** of **Wind**

Valid from **00:05 on Mon, 28th Oct 2013** until **12:00 on Mon, 28th Oct 2013**

A very intense low pressure system is forecast to run northeastwards across England and Wales early on Monday, bringing the potential for an exceptionally windy spell for southern parts of the UK. At the same time, persistent, heavy rain could cause some surface water flooding, while the winds will lead to some very large waves around our coasts.

There remains slight uncertainty in the timing, intensity and track of the low as well as the northern limit of the strongest winds. However, the public should be prepared for the risk of falling trees as well as damage to buildings and other structures, bringing disruption to transport and power supplies. The public should also consider adjusting travel plans.

This warning has been updated to bring forward the end time.

The public are advised to monitor the website for possible further updates.
